

Abstract of the Disclosure

A battery cable circuit protection device and circuit for preventing fluctuations in voltage from a supply battery is provided. The device includes a terminal base having a battery cable lug member adapted for mounting to and making an electrical connection with a battery post of the battery. A battery cable mounting structure is fixedly connected to the terminal base for detachably connecting the terminal base to a battery cable. The battery cable supplies a vehicle starter motor with electrical energy. A first fuse mount supported by the terminal base provides electrical interconnection to the battery post. A second fuse mount supported by the terminal base provides electrical energy to vehicle electrical systems other than the vehicle starter motor. The first and second fuse mounts are adapted for detachable a connection to a fuse which provides electrical interconnection between the first and second fuse mounts.
